Martin Mathew & Co Ltd - Carbon Footprint

Martin Mathew & Co Ltd are committed to working sustainably across all aspects of our business. From using more carbon efficient transport methods, improvements in packaging and farming methods through to recycling in our offices, these are just a few of the factors that contribute towards our carbon footprint.

In January 2024 we started our journey to calculate our Scope 1, 2 and 3 carbon emissions for 2023. We partnered with Climate Partner UK Ltd and with their assistance compiled the required data over a series of meetings.

Gathered in-house and from service providers, the data includes such things as transport (upstream/downstream) and purchased goods through to office energy consumption and employee commuting.

With our 2023 figures now submitted, Climate Partners UK have collated the results in a presentation, the slides of which are available upon request.

Martin Mathew & Co Ltd will continue to work alongside Climate Partners with the aim of consistently improving data quality and reducing our annual carbon footprint. We are currently looking to identify our hot spots and set some short and long term targets.

We will produce a biannual update on our progress which will be available upon request. Please do not hesitate to contact us by email at quality@martinmathew.co.uk.
